TotalNotify is...

your Emergency Notification Solution.

An outbound emergency or information notification can be sent within minutes of an event occurrence. This customizable solution allows you to design the system or service with the appropriate number of ports to quickly and effectively distribute notifications for your specific needs.

- + Messages can be pre-configured or created by recording and/or typing the notification information
- + Literally thousands of call lists can be created with unlimited contacts per list
- + Notify multiple lists with one notification
- + Comprehensive reports automatically delivered to user via email or view from any web browser

TotalNotify

offers a comprehensive GIS mapping feature for both our on-site and off-site hosted emergency notification solutions. This dynamic application utilizes fully compatible ESRI technology, providing users secure access to their specific maps for easy geographic selection of areas requiring notification. From inclement weather to missing persons to evacuations, TotalNotify enables rapid, accurate – and remote – activation of GIS-powered notifications from virtually any location in the world.
