Total Network Security

## Why Partner with Nex-Tech?

With our range of knowledge and experience, our certified technicians are the right choice for network security. The Total Network Security package is the most complete package available today. Its versatility allows your company to upgrade as you grow. In addition, our security is hassle-free. We eliminate the need for maintenance, updating, equipment purchase and multiple contracts by managing these items for you.

	Total Network Security	In-House Exchange and IT Staff
Managed & Updated	✓	Possibly
Monitored	✓	Unlikely
Monthly Reports	✓	Unlikely
Replacement Schedule	✓	Unlikely

## Annual Security Analysis with Full Report

Nex-Tech's Annual Security Analysis provides vulnerability and compliance management solutions that integrate security risk discovery, prioritization, remediation and reporting.

- » Define and manage security policies to monitor compliance within the industry
- » Single view of security risk information within the IT environment, across all locations and assets

## Content Filtering

Content filtering allows the choice of specific subjects, titles or even words to restrict what kind of material is accessible on a network. It can also be used to block access to sites deemed inappropriate.

## Anti-Virus Protection

Nex-Tech ensures your network is secure by installing and monitoring premium anti-virus software across your entire network.

## Advanced Protection

Inspection across any port and protocol, for either inbound or outbound traffic, provides ultimate coverage against today's threats.

Application intelligence and control provides granular control and real-time visualization of applications to guarantee bandwidth prioritization and ensure maximum network security and productivity.

Comprehensive logging and application traffic analytics of all intrusion attempts. The ability to filter logs enables Nex-Tech to highlight attacks.

## Total Network Security from Nex-Tech Includes:
